Description	Quantity	Rate	Amount

We conducted both daytime and nighttime inspections of the property. Daytime surveys showed that locating tadpoles is currently very challenging due to heavy debris along the lake edges. Despite this, we identified several tadpole clusters estimated to be 1.5–2 weeks old; within another week, these would likely have reached the shoreline. During nighttime patrols, conducted alongside the on-site security guard, we located and removed adult cane toads from common areas. Based on the size of the development and the number of lakes present, the proposed hours represent the level of service typically required to slow the growth of the cane toad population and maintain manageable activity levels.	1	\$0.00	\$0.00
