Reference No. 11225022-00

Mr. Bruce Bernard  
Manager of Field Operations  
Calvin, Giordano & Associates, Inc.  
1800 Eller Drive, Suite 600  
Fort Lauderdale, FL 33316

Dear Mr. Bernard:

Re: **Water Quality Sampling Report – October 2021**  
**Lakes 3 and 6 – Miromar Lakes**  
**Fort Myers, Lee County, Florida**

GHD Services Inc. (GHD) is pleased to present the results of our water quality sampling services for Lakes 3 and 6 – Miromar Lakes.

## **1. Water Quality Sampling - October 2021**

The October 2021 sampling event consisted of the collection of surface water samples from a total of five (5) test locations (WQ #1 through #4 and #6) from Lake 6 – Miromar Lakes, and one (1) location (WQ #5) at the outfall of Lake 3 within the Miromar Lakes Golf Club as identified on **Figure 1**. As discussed in May 2019, due to limitations of the lake depth at the weir location (i.e. WQ #3) and the potential for disturbance of sediments impacting the sample results, the sample collected at a depth of 36 inches was moved to a deeper area of the lake, at the west entrance to the east-west canal that discharges at the weir, and renamed to WQ Location #6. The October 2021 sampling event represents the seventh sampling event for the new WQ Location #6.

The sampling plan includes sample collection at the following locations and depths:

Sample Identification	Sampling Location	Sample Depth
WQ Location #1	Rip Rap in front of the Miromar Lakes Pkwy Bridge	18 inches
WQ Location #2	Mouth of Canal (west of Via Portofino Way)	18 inches
WQ Location #3A	Back of Weir (southeast of Via Navona Way)	18 inches
WQ Location #4	Beach front (east of the Miromar Lakes Pkwy & Montelago Ct.)	18 inches
WQ Location #5	Lake 3 Outfall within the Miromar Lakes Golf Club	18 inches
WQ Location #6	Front of Weir (southeast of Via Navona Way)	36 inches

Conductivity, dissolved oxygen, pH, and temperature were measured in the field with a calibrated YSI Model 556 multi-parameter water quality meter. Turbidity and total water depth were measured. Water clarity/transparency (i.e. Secchi depth) was also observed using a Secchi disk. Surface Water Field Sheets are attached. Field data is summarized in **Table 1**.

Samples are collected using direct-dip sampling methods. The samples are capped, labeled, packed on ice, and transported to Benchmark EnviroAnalytical, Inc., in North Port, Florida. Benchmark EnviroAnalytical, Inc. is certified by the State of Florida and NELAP (National Environmental Laboratory Accreditation Conference). Laboratory analysis are conducted for 5-Day Biochemical Oxygen Demand (BOD<sub>5</sub>), Total Suspended Solids (TSS), Total Nitrogen, nitrogen speciation (ammonia, TKN, and nitrate + nitrite), Total Phosphorus, Ortho Phosphorus (Field Filtered) and Chlorophyll-a.

All samples collected during the October 2021 sampling event were prepared and analyzed within the method required holding times. The laboratory data have been reviewed with respect to authenticity, precision, limits of detection, and accuracy of the data. The laboratory analytical results are summarized in the attached **Table 1**. The laboratory report and data compliance memorandum are also attached.

Trend graphs have been prepared for each monitor location for laboratory analytical results and select field measurements. The trend graphs include water quality action levels for select parameters as developed and presented in the Lake Management Plan for Miromar Lakes. GHD recommends that if a single measurement exceeds an action level the District notify their lake maintenance contractor to inspect the lake(s) for evidence of potential algal blooms and treat as needed. If a subsequent measurement exceeds an action level, it is recommended the District investigate potential reasons behind the change and take appropriate action(s) as applicable based on the findings.

## **2. Analytical Summary**

It appears that between the prior sampling event in August 2021 and the recent sampling event conducted on October 26, 2021:

- BOD<sub>5</sub> levels remained consistent except for at WQL #1 and #3A which slightly decreased;
- Dissolved Oxygen and DO% results varied, but remained relatively constant according to historical trends;
- TKN and Total Nitrogen remained constant at all 6 sampling locations;
- Orthophosphorus and Total Phosphorous remained relatively constant at all locations;
- Total Suspended Solids and turbidity remained relatively constant at all locations;
- Chlorophyll-a results remained constant except at WQL #5 which decreased to 16.5 mg/L, a decrease back under the action level from last sampling event;
- pH at almost all locations increased, except for WQL #5, which slightly decreased;

The dissolved oxygen readings at the monitoring locations fluctuate throughout the year as anticipated given the temperature of the water and biological activity. In general, the dissolved oxygen remains well above the action level for dissolved oxygen percent (%) of a minimum of 38%. All sample locations had relatively consistent dissolved oxygen levels as the last sampling event except for WQL #3A, which increased. WQL #2 has held a slightly upward trend over the last 4 sampling events. We will monitoring future trends at this location. The dissolved oxygen fluctuates throughout the year with apparent lows during the latter part of the year (e.g. September to December months). GHD recommends the District

notify their lake maintenance contractor to continue to watch for evidence of algal blooms during these time periods.

The pH at the monitoring locations generally remains consistent over time. Although the pH fluctuates, the pH typically remains within the upper and lower action levels. The pH during this month's sampling event increased at all locations, except for WQL #5, which slightly decreased, but remained consistent with historical levels.

The concentrations of chlorophyll-a were below the action level at all sample locations this month. It appears chlorophyll-a is elevated in Lake 3 during the monitor events conducted in warmer months of the year. This month's results were consistent with historical levels.

During the October 2021 monitoring event, the concentrations of total phosphorous varied, but remained consistent with historical levels, all being below the action level limit.

During the October 2021 sampling event, the concentrations of orthophosphate remained mostly consistent with historical levels, all below the action level limit. There has been a downward trend at WQL #2, #3A, and #5 over this year's events.

While the total nitrogen has fluctuated in the past, it has remained below the action levels. Total nitrogen remained consistent at all sample locations during the October 2021 monitoring event.

While turbidity has fluctuated in the past, the observed turbidity generally has stayed well below the action level and remained consistent, except for WQL #5, which was 420% higher than the last sampling events level.

Of note for future months prior to the next sampling event, based on historical data, it appears the BOD tends to be elevated during April/May. While the BOD fluctuates, including detections above the action level, the BOD generally does not remain above its action level for more than one monitoring event.

During the months of April/May, particularly at Lake 3, the lake maintenance contractor may need to inspect the lakes more often for evidence of potential algal blooms and treat as needed.

The conductivity at the monitoring locations fluctuates throughout the year but generally remain similar to other monitoring locations with the exception of WQL #5. The WQL #5 location is at the weir of the Lake 3 on the golf course, whereas the other sample locations are from Lake 6 in the residential development area. Therefore, the variation from WQL #5 to the other locations is not unexpected. The conductivity at WQL #5 is generally higher than the conductivity at the other monitoring locations. This may be caused by high levels of recent rain diluting the isolated water.

While the total suspended solids (TSS) have fluctuated, it generally remains below the action level. The results from October 2021 were consistent with historical trends and below the action level.

### **3. Annual Review**

Throughout the sampling events conducted in 2021, water quality conditions have remained relatively stable through the year, with notable trends highlighted below. Considering the climate of the Site, typically water quality is expected to dilute in the warmer, wetter months, and concentrate in the drier, cooler months.

The parameters measured during the sampling events in February, August and October showed stable conditions at most Lakes for BOD, DO, Total Nitrogen, Total Phosphorus, TSS, Chlorophyl A, Orthophosphate, Total kjeldahl nitrogen, pH, Turbidity, Conductivity, Water Depth and Temperature.

Specifically, a notable downward trend was seen over the last 3 sampling events for DO at WQL #1 and #4.

### **4. Conclusions and Recommendations**

It appears water quality conditions have improved between October 2020 and October 2021, particularly at location WQ#3A (outlet weir location).

Even with a slightly downward trend of DO, there do not appear to be water quality concerns at this time.

The next tri-annual sampling event is planned for February 2022.

Please call if you have questions or need additional information.

Sincerely,

GHD

Notes:

- S - Sample collected from edge of lake
- NS - Not sampled during noted event
- U - Not detected at the associated reporting limit
- I - Reported value is between method detection limit and the practical quantitation limit

\* DO values at or above 100% are possible super-saturation conditions due to high water temperatures and/or high volume of algae.

#### DATA QUALIFIERS THAT MAY APPLY:

A = Value reported is an average of two or more determinations.  
B = Results based upon colony counts outside the ideal range.  
H = Value based on field kit determination. Results may not be accurate.  
I = Reported value is between the laboratory MDL and the PQL.  
J1 = Estimated value. Surrogate recovery limits exceeded.  
J2 = Estimated value. No quality control criteria exists for component.  
J3 = Estimated value. Quality control criteria for precision or accuracy not met.  
J4 = Estimated value. Sample matrix interference suspected.  
J5 = Estimated value. Data questionable due to improper lab or field protocols.  
K = Off-scale low. Value is known to be < the value reported.  
L = Off-scale high. Value is known to be > the value reported.  
N = Presumptive evidence of presence of material.  
O = Sampled, but analysis lost or not performed.  
Q = Sample held beyond accepted hold time.

T = Value reported is < MDL. Reported for informational purposes only and shall not be used in statistical analysis.

U = Analyte analyzed but not detected at the value indicated.

V = Analyte detected in sample and method blank. Results for this analyte in associated samples may be biased high. Standard, Duplicate and Spike values are within control limits. Reported data are usable.

Y = Analysis performed on an improperly preserved sample. Data may be inaccurate.

Z = Too many colonies were present (TNTC). The numeric value represents the filtration volume.

I = Data deviate from historically established concentration ranges.

? = Data rejected and should not be used. Some or all of QC data were outside criteria, and the presence or absence of the analyte cannot be determined from the data.

\* = Not reported due to interference.

Oil & Grease - If client does not send sufficient sample quantity for spike evaluation surface water samples are supplied by the laboratory.

#### NOTES:

MBAS calculated as LAS; molecular weight = 340.

PQL = 4xMDL.

ND = Not detected at or above the adjusted reporting limit.

G1 = Accuracy standard does not meet method control limits, but does meet lab control limits that are in agreement with USEPA generated data. USEPA letter available upon request.

G2 = Accuracy standard exceeds acceptable control limits. Duplicate and spike values are within control limits. Reported data are usable.

#### COMMENTS:

Chlorophyll A lab filtered on 10/27/21 at 0846.

For questions or comments regarding these results, please contact us at (941) 723-9986.

Results relate only to the samples.

<sup>1</sup> "Sample Type" is used to indicate whether the sample was a grab (G) or whether it was a composite (C).

<sup>2</sup> "Sample Matrix" is used to indicate whether the sample is being discharged to drinking water (DW), groundwater (GW), surface water (SW), soil, sediment (SDMNT), or sludge (SLDG).

<sup>3</sup> "Container Type" is used to indicate whether the container is plastic (P) or glass (G).

<sup>4</sup> Sample must be refrigerated or stored in wet ice after collection. The maximum temperature during storage should be 6°C (42.8°F).

Under "Preservative," list any preservatives that were added to the sample container.

**Instructions:**

1. Each bottle has a label identifying sample ID, recommended preservative contained in the bottle, sample type, client ID, and parameters for analysis.

2. The following information should be added to each bottle label after collection with permanent black ink: date and time of collection, sampler's name or initials, and any field number or ID.

3. All bottles not containing preservative may be rinsed with appropriate sample prior to collection.

4. The client is responsible for documentation of the sampling event. Please note special sampling events on the sample custody form.

Laboratory Sample Acceptability: pH < 7

# **Laboratory Data Compliance Memo**

# Technical Memorandum

November 16, 2021

<b>To</b>	Mr. Bruce Bernard Manager of Field Operations Calvin, Giordano & Associates, Inc. 1800 Eller Drive, Suite 600 Fort Lauderdale, FL 33316	<b>Tel</b>	716.205.1977
<b>From</b>	Sheri Finn/ro/7-NF	<b>Ref. No.</b>	11225022
<b>Subject</b>	Analytical Results Compliance Report Surface Water Quality Monitoring Miromar Lakes Fort Myers, Florida October 2021		

## 1. Compliance Review

Samples were collected in October 2021 in support of the Miromar Lakes Surface Water Quality Monitoring sampling. The analytical results are summarized in Table 1. All samples were prepared and analyzed within the method required holding times. The method blank results were non-detect. All reported laboratory control sample (LCS) analyses demonstrated acceptable accuracy. Laboratory duplicate analyses were performed for some analytes. All results were acceptable, indicating good analytical precision. The matrix spike (MS) results were evaluated per the laboratory limits. The MS analyses performed were acceptable, demonstrating good analytical accuracy.

Based on this compliance review, the results in Table 1 are acceptable for use.

Regards

A handwritten signature in black ink, appearing to read "Sheri L. Finn".
