

The Tern Bay CDD has scheduled a community-wide pressure washing project to clean the sidewalks/walkways, curbing, street drains, and pavers located throughout the common areas of the community maintained by Tern Bay CDD.

Work will begin on October 13th and is anticipated to take 2-3 weeks, weather permitting. During this time, some sidewalks may be temporarily closed. Cones and signage will be placed to help direct pedestrian traffic, and residents may be asked to detour to alternate sidewalks.

Once an area has been pressure washed, a biological treatment will be applied to remediate areas impacted by mold. This treatment may cause temporary staining, but the discoloration should dissipate within 2-3 days.

The property will be completed in two phases. Please refer to the attached map showing the red and blue sections that outline the scheduled work areas with the red area being impacted first.

We appreciate your cooperation and patience as we complete this important project to improve the appearance and safety of our community.
